bounded arm, block 0
attack and local bound at $\delta = 10^{-6}$
softplus arm, block 0
attack and local bound at $\delta = 10^{-6}$
additive, with or
without the floor
block: $\|F(x) - F(\tilde{x})\|_\infty / \delta$
certified, additive, no floor
certified, additive, certified floor
certified, log-timescale, data-free
local, log-timescale, maximum
local, log-timescale, endpoint
attack, worst position
attack, last position
bounded arm, prediction
$\kappa = 10^{-6}$
additive bound infinite
from L = 1000
softplus arm, prediction
$\kappa = 10^{-6}$
prediction: width / 2κ
sequence length L
sequence length L
